Description 60 p.

Item Type REPORT

Abstract In this paper the benefits from fire protection services provided by several jurisdictions in the Washington Metropolitan Area are allocated to jurisdictions and distributed within jurisdictions to eight separate income classes. Benefits to non-residents in the metropolitan area are taken into consideration. These benefits are used to compute net flows of fire protection benefits between the District of Columbia and both the Maryland and Virginia suburban jurisdictions. Two alternative assumptions are used concerning the proportion of benefits accruing to people as opposed to property. The first assumes that 90% of benefits from fire protection services accrue to property and 10% accrue to people. The second assumes that 50% of benefits accrue to each. These two different proportions are used to obtain some index of sensitivity of the expenditure benefit estimates to the assumption regarding the distribution of total benefits to people and property. The study concludes that suburbanites under all different assumptions considered have a considerable net gain from D.C. through fire protection services. Estimated net flows of benefits are given.

Description 39 p.  
Item Type REPORT  
Abstract This report examines the impact of extreme weather and  
natural disasters on the fire service. It also  
addresses the types of service calls most likely to  
arise as a result of these disasters and what equipment  
and planning are needed in order to be prepared.  
Safety, mutual aid, shift management, resource  
identification, logistics, and other related issues are  
discussed, along with examples from case studies of fire  
departments that have learned from experience what can  
happen. The report provides information that fire  
departments can use to enhance their level of  
preparedness and ensure greater safety the next time  
disaster strikes.

Item Type REPORT

Abstract On October 31, 2006, a fire occurred in the four-story Mizpah Hotel located at 214 North Lake Street in downtown Reno, NV. Twelve of the hotel's residents died in the fire, 31 people were injured, 2 critically, and 70 people had to be rescued from the building by the fire department. More than 80 people were displaced by the fire.

Item Type REPORT

Abstract This report continues a series of annual studies by the USFA of on-duty firefighter fatalities in the United States. The specific objective of this study is to identify all on-duty firefighter fatalities that occurred in the United States and its protectorates in 2007, and to analyze the circumstances surrounding each occurrence. The study is intended to help identify approaches that could reduce the number of firefighter deaths in future years. In addition to the 2007 overall findings, this study includes information on seatbelt use for firefighters and efforts to encourage seatbelt use.

Description 50 p.  
Item Type REPORT  
Abstract The Transportation Security Administration (TSA) uses undercover, or covert, testing to approximate techniques that terrorists may use to identify vulnerabilities in and measure the performance of airport security systems. During these tests, undercover inspectors attempt to pass threat objects through passenger and baggage screening systems, and access secure airport areas. In response to a congressional request, GAO examined (1) TSA's strategy for conducting covert testing of the transportation system and the extent to which the agency has designed and implemented its covert tests to achieve identified goals; and (2) the results of TSA's national aviation covert tests conducted from September 2002 to June 2007, and the extent to which TSA uses the results of these tests to mitigate security vulnerabilities. To conduct this work, GAO analyzed covert testing documents and data and interviewed TSA and transportation industry officials.

Description 74 p.  
Item Type BOOK  
Abstract This guide is intended to assist State and local law enforcement and other first responders who may be responsible for preserving an electronic crime scene and for recognizing, collecting, and safeguarding digital evidence. It is not all inclusive but addresses situations encountered with electronic crime scenes and digital evidence. All crime scenes are unique and the judgment of the first responder, agency protocols, and prevailing technology should all be considered when implementing the information in this guide. First responders to electronic crime scenes should adjust their practices as circumstances-including level of experience, conditions, and available equipment-warrant. The circumstances of individual crime scenes and Federal, State, and local laws may dictate actions or a particular order of actions other than those described in this guide. First responders should be familiar with all the information in this guide and perform their duties and responsibilities as circumstances dictate.

Description 54 p.  
Item Type REPORT  
Abstract Hospitals must be prepared to respond to natural and manmade mass casualty incidents that may cause sudden demand on services. Disaster drills have been identified as a critical component of preparedness because they allow the institution to test response capabilities in real time. Evaluation of these activities is essential to understand the strengths and weaknesses of an institution's disaster response.

Evaluation is based on accurate observation. Accurate observation requires careful documentation of events before, during, and after a drill. Using a standardized observation and evaluation approach allows for a consistent record each time a drill occurs within an institution. A standardized approach helps both to capture the specific strengths and weaknesses of hospital responses during the drill and to draw comparisons across hospitals participating in similar drills. Using a standardized evaluation also allows comparison from one drill to the next to determine improvements in areas where weaknesses have been identified. Drawing from the published literature on disaster drills as well as input from a variety of experts in the field, the Johns Hopkins University Evidence-based Practice Center (JHU-EPC) developed a set of evaluation modules and addendums for operationalized hospital disaster drills in 2004 entitled Evaluation of Hospital Disaster Drills: A Module-Based Approach. This document includes substantial detail on evaluation of hospital disaster drills. In 2005, the Agency for Healthcare Research and Quality (AHRQ) requested that the JHU-EPC develop an abridged version of the original evaluation tool that focuses on the critical elements of drill evaluation that all hospitals should address as part of disaster preparedness. This document describes the principles behind the approach used to develop the abbreviated evaluation modules and addendums and recommendations for their use.

Abstract The California State Homeland Security Strategy was developed as defined based on the duties and responsibilities for protection of California as directed by the Governor. This strategy describes how California will enhance its capability to prevent, protect against, respond to, and recover from threats and acts of terrorism and natural disasters by effectively and efficiently enhancing the security of our citizens, critical infrastructure, and economic base. OHS remains committed to an enterprise-wide approach to the fostering and building of collaborative partnerships with federal agencies, State, local, tribal and the private sector for implementing the goals and objectives of the California Homeland Security Strategy. This collaboration will be accomplished through clear and concise communications with partners at all levels for determination of their needs for the development of policies, plans, and requirements in an all-hazards environment.

 Description 84 p.  
 Item Type REPORT  
 Abstract During the past several years, concerns have grown in the United States and around the world about the potential emergence of an influenza virus of pandemic proportions. Such concerns have prompted influenza pandemic planning and preparedness initiatives in the United States and abroad. These efforts are led at the global level by the World Health Organization and are supported by the efforts of individual countries. Influenza pandemics are recurring natural disasters, having struck during the twentieth century in 1918, 1957, and 1968. Both the onset and the magnitude of influenza pandemics are difficult to predict. The 1918 "Spanish flu," the deadliest pandemic in history, is estimated to have killed more than 50 million people worldwide. Given that the current world population is more than three times as large as that of 1918, an influenza pandemic, regardless of its severity, could result in millions of deaths. Morbidity rates during past pandemics reached 25 - 35 percent of the total population. A similar morbidity rate in a future influenza pandemic could result in millions of Americans seeking medical care. Such a pandemic could quickly overwhelm U.S. hospitals and emergency departments. To assist communities planning for a pandemic, the Federal Government has developed a Pandemic Severity Index. The Index uses 5 categories of increasing severity (Category 1 to Category 5) to characterize a pandemic. The categories are primarily determined by case fatality ratio, i.e., the rate of death among persons who already have a particular disease. Communities will have different combinations of responses and interventions depending on the severity of a pandemic. Every sector of the U.S. health care system must be prepared for the

challenge of increased demand for services in the face potentially scarce resources and possible disruptions in infrastructure. Preparedness will mean different things for different sectors. Hospitals, clinics, emergency medical services, private practice, longterm care institutions, hospices, and home health care agencies, for example, all will have distinct challenges. Federal Government agencies have been working together to help ensure that each health care sector has information necessary to that specific sector on how to prepare for and respond to a pandemic. This report serves as a discussion piece for home health care agencies and others to consider; this is not a Department of Health and Human Services (HHS) guidance. The Agency for Healthcare Research and Quality (AHRQ), with funding by the HHS Office of the Assistant Secretary for Preparedness and Response (ASPR) and in collaboration with the Centers for Disease Control and Prevention (CDC), convened an expert panel meeting on July 12-13, 2007, in Washington, DC. The meeting brought together governmental and nongovernmental experts in the fields of home health care and emergency and disaster planning.

During the meeting, the expert panel reviewed the work currently being done in home health care planning and preparedness and explored the key issues and challenges of providing home health care services during an influenza pandemic. This report had its genesis in the rich discussion among these experts. It is hoped that the information and resources here will be of value not only to home health care agencies, but also to State and local pandemic influenza planners.

Description 43 p.  
Item Type REPORT  
Abstract In 2006, the subcommittee concluded there was a need for increased accountability and transparency for unspent funds in federal programs and agencies, and requested GAO review the status of balances not drawn down by grantees by the time the grants' period of availability had ended. GAO was asked to answer these questions: (1) to what extent are there undisbursed grant balances in expired grant accounts and do they share any program characteristics?; and (2) do these expired grants share grant management challenges and how have federal agencies improved grant closeout and diminished undisbursed balances? To do this, GAO analyzed grant balance data from the largest federal grant payment system; reviewed grant management problems and corrective actions from more than 150 audit reports; and reviewed guidance from the Office of Management and Budget (OMB) and the Code of Federal Regulations.

Description 10 p.  
Item Type REPORT  
Abstract The Emergency Management Assistance Compact (EMAC) is an agreement among member states to provide assistance after disasters overwhelm a state's capacity to manage consequences. The compact, initiated by the states and coordinated by the National Emergency Management Association, provides a structure for requesting emergency assistance from party states. In 1996 Congress approved EMAC as an interstate compact (P.L. 104-321). EMAC also resolves some, but not all, potential legal and administrative obstacles that may hinder such assistance at the state level. EMAC also enhances state preparedness for terrorist attacks by ensuring the availability of resources for fast response and facilitating multi-state cooperation in training activities and preparedness exercises. In June of 2008, a bill to reform mutual aid agreements for the National Capital Region (P.L. 110-250) was enacted to expand the types of organizations and agencies in the region that are authorized to enter into agreements and ease the requirements for agents and volunteers to respond to an incident. Legislation in the 110th Congress (S. 1452) would require EMAC to ensure that licensed mental health professionals with expertise in treating vulnerable populations are included in the leadership of the National Disaster Medical System and are available for deployment with Disaster Medical Assistance Teams.

Description 39 p.

Item Type REPORT

Abstract In 2005, as a result of Hurricane Katrina, more than 1,600 people lost their lives and more than a million were driven from their homes on the Gulf Coast. Tens of thousands of homes in New Orleans were flooded, many requiring either demolition or gutting before reconstruction. Nearly 3 years later, the New Orleans area still faces significant debris management issues and challenges. For example, the Louisiana Department of Environmental Quality (LDEQ) stated that while the Department of Homeland Security's Federal Emergency Management Agency (FEMA) estimated in July 2008 that it had funded about 16,900 home demolitions, an estimated 6,100 homes remained to be demolished around the New Orleans area. The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act) establishes programs and processes for the federal government to provide major disaster and emergency assistance to states, local governments, tribal nations, and others. FEMA has the responsibility for administering the provisions of the Stafford Act, including approving and funding the assistance provided under it. This assistance has been provided to the Gulf Coast under the Department of Homeland Security's National Response Framework (formerly called the National Response Plan). In New Orleans, the U.S. Army Corps of Engineers (Corps of Engineers) was the primary federal agency responsible for providing debris removal and disposal until it concluded its response activities in September 2007. The Environmental Protection Agency (EPA), the coordinator of federal emergency support for oil and hazardous materials releases, also assisted the Corps of Engineers and LDEQ with debris removal and disposal and continues to undertake Katrina response activities, such as monitoring landfill operations. The federal law addressing the management of hazardous and other solid wastes--the Resource Conservation and Recovery Act--addresses nonhazardous solid wastes under subtitle D. The act prohibits "open dumping"--the disposal of solid waste in landfills failing to meet the relevant criteria--and requires state plans to prohibit the establishment of open dumps. RCRA provides EPA with limited authority to address environmental problems at solid waste landfills. The Water Resources Development Act of 2007 directed GAO to address certain activities related to debris management in the wake of Hurricane Katrina. We briefed relevant committee staff on the results of our work on March 6, 2008, and held subsequent discussions with them in March and April 2008. We are following up with this report, which provides more detail on the topics covered in the

briefing. This report describes (1) key plans and practices federal and state agencies are currently using to oversee debris removal and disposal in response to Hurricane Katrina in New Orleans, (2) enforcement actions state and federal agencies have taken related to Katrina debris removal and disposal, and (3) actions by LDEQ and EPA in response to potential environmental issues at the Gentilly Landfill in New Orleans.

Description 11 p.

Item Type REPORT

Abstract On June 4, 2007, a 53-year-old male career Engineer participated in physical fitness training as part of the Fire Department's physical fitness program. During the fitness period, his engine company was dispatched to three calls. After the third call, and after completing the fitness training, the crew drove to a restaurant for lunch. While ordering food the Engineer gave his money to a crew member and walked outside to call his wife. As he walked outside, he collapsed. A customer entered the restaurant and alerted the fire fighters that "someone was down on the sidewalk." The crew members found the Engineer unresponsive, with no pulse, and with agonal breathing (1343 hours). Dispatch was notified, cardiopulmonary resuscitation (CPR) and advanced life support were begun, an ambulance responded, and the Engineer was transported to the local hospital's Emergency Department. Inside the Emergency Department, advanced life support treatment continued with no improvement in the Engineer's condition. The attending physician pronounced the Engineer dead at 1427 hours and resuscitation efforts were discontinued. The death certificate and autopsy (completed by the Medical Examiner) listed "coronary artery heart disease" as the cause of death. The NIOSH investigator concluded that the physical stress of responding to three alarms and participating in vigorous exercise, coupled with the Engineer's underlying coronary artery disease, triggered his sudden cardiac death. The NIOSH investigator offers the following recommendation to prevent similar incidents. (1) Ensure annual medical evaluations that

include electrocardiograms (EKGs) and exercise stress tests are performed for fire fighters at risk for coronary artery disease. The following recommendation is made to enhance safety and health. It did not contribute to the Engineer's death. (2) Eliminate or reduce the frequency of periodic chest x-rays in asymptomatic fire fighters, unless clinically indicated.

Abstract Periodically, the U.S. Fire Administration (USFA)  
publishes a statistical portrait of the fire problem in  
the United States. This brochure summarizes the 14th  
edition of Fire in the United States, 1995-2004. The  
analysis addresses the national fire problem and subsets  
of this problem, such as residential and non-residential  
structure fires. It presents trends of fires, deaths,  
injuries, and dollar loss over the 10-year period, with  
emphasis on 2004 statistics relating to causes, property  
types, and casualty characteristics.

Abstract

Every day in cities and towns across the Nation, emergency response personnel respond to incidents of varying scope and magnitude. Their ability to communicate in real time is critical to establishing command and control at the scene of an emergency, to maintaining event situational awareness, and to operating overall within a broad range of incidents. However, as numerous after-action reports and national assessments have revealed, there are still communications deficiencies that affect the ability of responders to manage routine incidents and support responses to natural disasters, acts of terrorism, and other incidents. Recognizing the need for an overarching emergency communications strategy to address these shortfalls, Congress directed the Department of Homeland Security's (DHS) Office of Emergency Communications (OEC) to develop the first National Emergency Communications Plan (NECP). Title XVIII of the Homeland Security Act of 2002 (6 United States Code 101 et seq.), as amended, calls for the NECP to be developed in coordination with stakeholders from all levels of government and from the private sector. In response, DHS worked with stakeholders from Federal, State, local, and tribal agencies to develop the NECP-a strategic plan that establishes a national vision for the future state of emergency communications. The desired future state is that emergency responders can communicate: As needed, on demand, and as authorized; At all levels of government; Across all disciplines. To measure progress toward this vision, three strategic goals were established: Goal 1-By 2010, 90 percent of all high-risk urban areas designated within the Urban Areas Security Initiative (UASI) are able to demonstrate response-level emergency communications within one hour for routine events involving multiple jurisdictions and agencies. Goal 2-By 2011, 75 percent of non-UASI jurisdictions are able to demonstrate response-level emergency communications within one hour for routine events involving multiple jurisdictions and agencies. Goal 3-By 2013, 75 percent of all jurisdictions are able to demonstrate response-level emergency communications within three hours, in the event of a significant incident as outlined in national planning scenarios.

Item Type REPORT  
Abstract To prepare the nation for potential catastrophic events, including terrorist attacks, the White House's Homeland Security Council has developed fifteen planning scenarios for use by Federal, State, and local homeland security officials in order to help them prepare for, respond to and effectively recover from these potential incidents. National Planning Scenario #11, developed under this inter-agency process, envisions the detonation of a Radiological Dispersal Device (RDD) or "dirty bomb" in a major downtown urban area. That scenario was just played out in a national counterterrorism exercise called TOPOFF, mandated by Congress and conducted every two years. This year, TOPOFF IV (T4) took place from October 14-24, 2007. In the exercise, involving thousands of federal, state and local officials and sponsored by the Department of Homeland Security (DHS), terrorists detonated an RDD in Guam, Portland, Oregon and Phoenix, Arizona. The exercise tested the handling and flow of operational and time critical intelligence between agencies and the existing procedures and policies for domestic incident management of a major radiological event. One of the key assumptions in National Planning Scenario #11 is that all potentially exposed individuals (an estimated 100,000 people, including 20,000 victims with detectable contamination) will be tested for radiological exposure and/or contamination and that a valid method exists for testing these clinical specimens. Yet, today validated methods to test clinical specimens in a radiological emergency exist for only six of the 13 highest priority radioisotopes most likely to be used in a terrorist scenario. For those isotopes for which "validated" methods do exist screening 100,000 individual clinical specimens in the wake of a radiological attack could take more than four years to complete due to the current shortfall in radiochemistry laboratories, personnel and equipment. Environmental sampling could take as long as six years to complete given the current capacity and capabilities of the U.S. radiochemistry laboratory infrastructure. The analytical requirements for responding to a potential radiological emergency are in stark contrast to the nation's existing capabilities. This drastic shortfall in current radiochemistry laboratory capacity, capability and competency is magnified by bureaucratic inertia in addressing this critical issue and the lack of clear lines of authority and responsibility for responding to a radiological event. A 2005 Department of Homeland Security report on radiological response needs highlighted the potential public health implications of these weaknesses. "Individual dose assessment is essential for predicting the clinical severity, treatment, and survivability of

exposed individuals and identifying those with minimal or no exposure," it said. But, despite the best efforts of many of the radiological experts in the trenches at agencies throughout the federal government the overall government effort to close these gaps have been slow, meek and cumbersome.

Item Type REPORT

Abstract While the federal government has resources at hand for responding to terrorist attacks, the proximity of state and local first responders insures they will almost always be the first to arrive at the site of an attack. For this reason, the preparedness of state and local governments has become a salient national issue. The President's National Strategy for Homeland Security, issued in June 2002, proposes a number of measures to enhance state and local preparedness for terrorist attacks, particularly those involving weapons of mass destruction. Most of these measures, presently undertaken by FEMA and several other agencies, but will be transferred to the Department of Homeland Security (DHS), which Congress authorized in the Homeland Security Act of 2002 (P.L. 107-296). As the 108th Congress monitors the implementation of the new department; it might consider a range of issues, which include the following: Amount and Uses of Federal Assistance-Observers have urged Congress to increase levels of financial and technical assistance available to states and localities. Some observers have also asked for more flexibility with federal funds. Use of risk analysis-The process of risk analysis is generally used by risk experts to identify and evaluate options for reducing risks to human health and safety. The usefulness of risk analysis and the appropriate methodology, however, are frequently debated by emergency managers and analysts. Federal training programs-State and local first responders generally rate federal terrorism training as effective and helpful.

Many observers, however, cite a number of faults in federal training, such as lack of interagency coordination, insufficient quantity of course offerings, and lack of course information for state and local officials. Mutual aid compacts-Mutual aid compacts are widely acknowledged to be an effective and efficient means of sharing emergency management resources among different jurisdictions. Federal support for mutual aid could better prepare states and localities for all disasters, including terrorist attacks. Joint training exercises-Exercises can potentially improve emergency preparedness by allowing first responders from different agencies (e.g., law enforcement, fire and rescue, and public health) and different levels of government to become familiar with others' capabilities and practices.

Readers interested in analysis of state and local preparedness functions of the new Department of Homeland Security should see CRS Report RL31490, Department of Homeland Security: State and Local Preparedness Issues. Report for Congress. RL31266

Item Type DISSERTATION  
Abstract Concerns about inadequate radio communications at the scene of disasters predate 9/11, and have been a focal point of homeland security funding since 2001. Under the umbrella term "interoperability," grant funding is facilitating the recent deployment of equipment to allow field personnel to patch radio systems together, with the expectation of immediate improvement of emergency scene communications dysfunction. This thesis argues that there are numerous causal factors for inadequate disaster communications. Communications impediments include insufficient radio infrastructure, behavioral reactions by people in stressful situations, intergovernmental relations, inadequate procedures and training, and general lethargy over the need to institute special operating policies differing from routine practices. The sole reliance upon technological solutions, without proportionate training and practice greatly reduces the effectiveness of radio patching equipment. Quite opposite from the intended effect, patching equipment, in the hands of those only minimally acclimated to radio system architecture, is likely to trigger unintended consequences of chaotic system overload (by combining two or more busy channels) and sector vulnerability (by combining unsecured general public systems with previously isolated public safety systems). Our goal is to provide a thought-provoking examination of the entire realm of emergency scene communications issues and practical recommendations beyond superficial technological solutions.

Abstract Issues surrounding situation awareness (SA) have been implicated in numerous firefighter near-miss and line-of-duty death reports. This study examines a wide

variety of potential barriers that impact commander SA, including: mission/goal barriers; attention management, data/information management, and communications barriers; barriers in the areas of command location and support, response time, size-up, incident command and incident management systems (especially at residential dwelling fires); human factors such as physical/mental stress; staffing-related barriers such as workload, crew resource management and team performance.

Abstract This document is designed as a guide to assist  
organizations to become compliant with the National  
Incident Management System (NIMS), March 1, 2004,  
edition, Incident Command System (ICS) as mandated by  
Homeland Security Presidential Directive [HSPD]-5. The  
Incident Command System is the national model management  
system for coordinating the combination of facilities,  
equipment, personnel, procedures, and communications  
operating within a common organizational structure,  
designed to enable effective and efficient incident  
management.

Copies 105526 c.1: CIRCULATION - BOOKS [status: IN]  
Description 288 p.  
Item Type BOOK  
Tbl. of Contents Introduction to the issues -- What this book is, and is  
not -- Challenging the traditional crime and punishment  
approach -- Box 1: What are high income and low income  
countries? -- Developing a new framework for community  
safety and violence prevention -- Brief outline of the  
rest of the book -- Defining the problem: the prevalence  
of violence and insecurity -- Defining community safety  
and violence -- Box 2: Violence: a lexicon -- The  
prevalence of violence: an overview -- Box 3. Violence  
versus crime -- Violence across the life course: --  
Childhood 0-14 -- Youth and young adulthood 15-29 --  
Adulthood 30-59 -- Old age 60 plus -- Violence and

insecurity -- Box 4. A short note on "race" and violence  
-- Summary: a largely private issue or a public concern?  
-- Box 5. Violence in a global city: a thought  
experiment -- Analysing the problem: causes, impacts,  
and prevention of violence -- Root causes of violence/  
risk and resilience factors -- The costs of violence --  
The prevention of violence -- Conclusion: from analysis  
to action on violence prevention -- Coordinated  
community safety: from local to global -- Coordination  
and the question of scales -- Box 6. Environmental  
determinants of health -- Coordination at the  
neighbourhood scale -- Box 7. Neighbourhood capacity  
building in Buenos Aires -- Box 8. Reducing crime and  
violence in a Danish housing estate -- Coordination at  
the city scale -- Box 9. Community safety begins at  
home: coordinated intimate partner abuse prevention in  
Duluth US and London UK. Box 10. Bogota's integral plan  
on security and co-existence -- Box 11. Community safety  
in rural areas: British Columbia Canada and Kadjebi  
Ghana -- Coordination at the nation scale -- Box 12.  
Tanzania: an example of local to national up-scaling --  
Box 13. New Zealand's top-down approach -- Coordination  
at the regional scale and international scales -- Box  
14. Raising voices in East and Southern Africa --  
Conclusion: coordination at various scales and the  
question of good governance -- The process of community  
safety planning -- Stage one: deciding on the problem  
and developing partnerships -- Box 15. Potential  
partners -- Box 16. Defining the problem and developing  
leadership in Toronto 1988-1991 -- Stage two: Diagnostic  
tools and consultation on safety -- Box 17.  
Victimization surveys: a case study of Papua New Guinea  
-- Box 18. Victimization surveys in rural British  
Colombia and Pakistan -- Box 19: Safety audits: what  
works and what doesn't (Russia, UK, Australia, Canada)  
-- Stage three: developing work plans based on a logic  
framework -- Box 20. A logic-based workplan in Cardiff  
-- Box 21. Questioning appeals to community -- Stage  
four: implementing work plans -- Stage five: evaluation:  
the hardest part -- Stage six: modification,  
maintenance, and mainstreaming -- Box 22. Successive  
community safety processes: the example of the Toronto  
Safe City Committee 1990-2007 -- The components of  
community safety -- Early childhood strategies -- Box  
23. Men working with men to become better fathers in  
Mexico and South Africa -- Box 24. the international  
growth of mother's centres in eastern Europe --  
School-based interventions -- Box 25. Community building  
around schools in Stockholm -- Box 26. A comprehensive  
violence prevention curriculum in rural Canada --  
Community economic development approaches -- Box 27.  
Generating employment and safety in Durban -- Getting  
the message out: public awareness -- Capacity building  
and the question of self-defense -- Service integration  
-- Box 28. Developing services in Bacolod Philippines --  
Safer spaces: spatial policies -- Box 29. Inclusive  
parks in Toronto and Melbourne -- Policing -- Box 30.

Community police stations in Mumbai -- Legal and correctional approaches -- Conclusion: a wide menu of community safety strategies -- Conclusions -- What are the principles of good practice in the field? -- Mainstreaming gender and overcoming the public private divide -- Evaluation and publicizing good practice -- The possible futures of community safety and violence prevention.

Description 41 p.  
Item Type REPORT  
Abstract This Department of Homeland Security's overriding and urgent mission is to lead the unified national effort to secure the country and preserve our freedoms. While the Department was created to secure our country against those who seek to disrupt the American way of life, our charter also includes preparation for and response to all hazards and disasters. The citizens of the United States must have the utmost confidence that the Department can execute both of these missions. The 2008 Strategic Plan serves to focus the Department's mission and sharpen operational effectiveness, particularly in delivering services in support of Department-wide initiatives and the other mission goals. It identifies the goals and objectives by which we continually assess our performance. The Department uses performance measures at all levels to monitor our strategic progress and program success. This process also keeps the Department's priorities aligned, linking programs and operations to performance measures, mission goals, resource priorities, and strategic objectives. Faced with the challenge of strengthening the components to function as a unified Department, DHS must coordinate centralized, integrated activities across components that are distinct in their missions and operations. Thus, sound and cohesive management is the key to Department-wide and component-level strategic goals. We seek to harmonize our efforts as we work diligently to accomplish our mission each and every day. Americans are a resilient people. We have overcome great adversities in the past, and we will do so again. Regardless of what challenges may come, we will work tirelessly to protect our country. In the face of national challenges, we are one Nation. And here at DHS, we are one Department, unified to ensure the security of the American people - a Department that will continue striving to protect our homeland while ensuring

the strength of our economy and preserving our cherished American freedoms and liberties. In this spirit, it is important to acknowledge that this Strategic Plan is a living document and will be revised as needed to guide a dynamic Department and its ever-changing requirements.

 Description 4 p.  
 Item Type REPORT  
 Abstract Hurricanes are among the most dramatic, damaging and potentially deadly weather events. The force of hurricane winds alone can cause tremendous devastation, toppling trees and power lines and undermining weak areas of buildings. During a hurricane, homes, businesses, public buildings, roads and power lines may be damaged or destroyed by high winds and floodwaters. Debris can break windows and doors and block roads and bridges, and flash flooding can cause extensive damage. Fortunately, individuals and communities can take some measures to prevent and offset hurricane damage. This publication features detailed information that can help reduce the risks you face from hurricanes. More

Description 25 p.  
Item Type REPORT  
Abstract Effective allocation of pandemic influenza vaccine will play a critical role in preventing influenza and reducing its effects on health and society when a pandemic arrives. The specific type of influenza that causes a pandemic will not be known until it occurs. Developing a new vaccine in response will take several months and pandemic vaccine may not be available when cases first occur in the United States. Moreover, once vaccine production begins, it will not be possible to make enough new vaccine to protect everyone in the early stages of a pandemic. The U.S. Government is taking steps to minimize the need to make vaccine allocation decisions by supporting efforts to increase domestic influenza vaccine production capacity. Significant funding is being provided to develop new vaccine technologies that allow production of enough pandemic influenza vaccine for any person in the United States who wants to be vaccinated within six months of a pandemic declaration. Until this goal is met, Federal, State, local and tribal governments, communities, and the private sector will need guidance on who should be vaccinated earlier during the pandemic to best protect our people, communities, and country. Issues to consider in drafting guidance on pandemic influenza vaccination are different and more complex than in developing recommendations for annual vaccination against seasonal influenza. In contrast with seasonal influenza, during a pandemic nobody in the population is likely to have immunity to the virus, many more people will become ill, and rates of severe illness, complications and death are likely to be much higher and more widely distributed throughout the population. The greater frequency and severity of disease will increase the burden on health care providers and institutions and may disrupt critical products and services in health care and other sectors. National and homeland security

could be threatened if illness among military and other critical personnel reduces their capabilities. Because the needs that must be addressed by pandemic vaccination differ from seasonal influenza vaccination, the guidance on vaccination differs as well. This guidance is intended to provide strong advice to support planning an effective and consistent pandemic response by States and communities. Nevertheless, it is important that plans are flexible as the guidance may be modified based on the status of vaccine technology, the characteristics of pandemic illness, and risk groups for severe disease - factors that will remain unknown until a pandemic actually occurs.

Description 113 p.  
Item Type REPORT  
Abstract This is the final report on the National Institute of Standards and Technology (NIST) investigation of the collapse of the World Trade Center Building 7 (WTC 7), conducted under the National Construction Safety Team Act. This report describes how the fires that followed the impact of debris from the collapse of WTC 1 (the north tower) led to the collapse of WTC 7; and evaluation of the building evacuation and emergency response procedures; what procedures and practices were used in the design, construction, operation, and

maintenance of the building; and areas in current building and fire codes, standards, and practices that warrant revision. Extensive details are found in the companion reports, NIST NCSTAR 1-9 and NIST NCSTAR 1-9A.

Also in this report is a summary of how NIST reached its conclusions. NIST complemented in-house expertise with private sector technical experts; accumulated copious documents, photographs, and videos of the disaster; conducted first-person interviews of building occupants and emergency responders; analyzed the evacuation and emergency response operations in and around WTC 7; performed computer simulations of the behavior of WTC 7 on September 11, 2001; and combined the knowledge gained into a probable collapse sequence. The report concludes with a list of 13 recommendations for action in the areas of increased structural integrity, enhanced fire endurance of structures, new methods for fire resistant design of structures, enhanced active fire protection, improved emergency response, improved procedures and practices, and education and training. One of these is new; the other twelve are reiterated from the investigation into the collapse of the WTC towers. Each of the 13 is relevant to WTC 7.
